12. The seat-belt should be tightened to a comfortable fit just a comfortable fit.
13. The seat-belt should be tightened to a comfortable fit just a comfortable fit.

A  GUARANTEE

GUARANTEE

The period of guarantee begins on the sale date and runs for 2 years.

The guarantee is valid only for products that have not been modified.

The basis for the processing of complaints is the original sales receipt with date and a clear description of the defect.

The manufacturer is liable only for damage to a product produced by the manufacturer.

The guarantee becomes invalid for the following cases:

1. For damage that occurred due to an accident.
2. For normal wear and tear that is to be expected for daily use.
3. For original sales receipt.
4. For poor care and improper use (see usage instructions).
5. For neglect or repairs to the product performed by a third party.
6. For non-fulfillment of the stated stipulations of the guarantee.

THE FOLLOWING GENERAL COMMENTS ARE TO BE FOLLOWED:

- Keep the operating instructions for later reference.
- Group 1-8 (9-25 kg).
- Install only in direction of travel.
- Lufthild is only suitable for use in vehicles equipped with a lap-belt or three-point restraint systems or seatbelt, which are approved according to UN-ECE regulations N.16 or other comparable standards.
- NEVER USE LUFTHILD IN SEATS EQUIPPED WITH AIRBAGS.
- Fasten the Lufthild in the automobile so that it is not squeezed by the front seats or vehicle doors.
- The belts should not be twisted or crimped.
- Always put the belt on the child, as long as it is located in the Lufthild.
- Never leave a child in Lufthild unattended.
- Lufthild can be cleaned with lukewarm water and soap.
- Protect Lufthild from direct sunlight.
- You should not modify the Lufthild and you should follow the assembly and operating instructions carefully, because otherwise certain dangers cannot be ruled out.

These instructions may contain printing errors or other types of errors.

Technical data subject to change.

INSTRUCTIONS

Lufthild is an inflatable, child restraint system for Groups 1-8 and for children from 9 months to 7 years old (9-25 kg).

TUV Approval number 030009.

Lufthild is fully functional only when completely inflated.

Lufthild is correctly inflated when the two marks are aligned with the printed indicator on the front of the top cushion and the lower cushion is inflated after 3-4 more strokes with the air pump after the velcro bands have been forced apart.

In Group 2, from 4 years old and older or 18 kg and up, the system can be used without the back part.

1. Please use the added pump to inflate the system at three points (Fig. 1):
   1. At the bottom of the hinged top part.
   2. At an opposing position on the bottom part.
   3. At the back element.

2. Please make sure that these valves do not become dirty or damaged. Otherwise, they must be cleaned or replaced.

3. If the safety valves are damaged, the Lufthild should not be used in an automobile.

4. Please make sure that these valves are closed tight when you inflate the Lufthild, Lufthild is also equipped with two safety valves, one each in the top and bottom part of the Lufthild.

5. Slide the back element as shown (from ca. 4 years old and older or 18 kg and up, this part is no longer necessary) (Fig. 2).

6. To insert the seat belt, open the Velcro fastener and swing open the top part (Fig. 3).

7. Insert the lap belt in the groove as shown and put the shoulder belt to one side (Fig. 4).

8. Insert the belt tab into the buckle until you hear a click and it locks in place (Fig. 5).

9. Swing the top part down and close with the Velcro fastener (Fig. 6).

10. Tighten three-point belt (Fig. 7).

11. Adjust lap belt in the belt clamp so that the open, outer sides are on top (Fig. 8).

12. Thread the shoulder belt according to the same procedure. For an analogous procedure using the lap belt without the shoulder belt, the belt clamp is then also not necessary.

DISASSEMBLY

13. Open belt buckle by pressing the button (Fig. 10).

14. Open the Velcro fastener and swing the upper part upwards (Fig. 11). Take the Lufthild off of the child.

15. To let out the air, gently press the valves together (Fig. 12).
